PROJECTS

Mobile Recommendation system using python

- ▣ This project aims to suggest of recommend mobiles to the various users by intake of their ratings, comments and history. the system proposed is a kind of collaborative-based filtering system which finally recommends the likeable mobile.

Social Engineering in Cybersecurity:

Effect Mechanisms, Human Vulnerabilities and Attack Methods

- ▣ This project proposes a conceptual model which provides an integrative and structural perspective to describe how social engineering attacks work. Three core entities (effect mechanism, human vulnerability and attack method) are identified to help the understanding of how social engineering attacks take effect.
